X-PACK WIFI Drone APP Operation Guide

This version of drone comes with the WIFI Live Stream Camera built-in exciting AR shooting game function.

Download the app "XT GO" from App Store / Google Play.

How to connect the WIFI Signal

1, Power on the drone.
2, Go to the WIFI setting on phone / device, choose the WIFI signal of the drone (X-PACK+Numbers) , and connect it.
3, Then open the "XT GO " app, choose alternative PVE or FLY mode to start flying.

⚠ Note: When power of the drone is too low, it might unable to be connected successfully.

1

After connecting the WIFI signal between the drone and mobile device, and open the app, we can see the screen as image above.

❶ **PVE**: AR game is not available for X-PACK 2

❷ **FLY**: Press the FLY button, to perform the normal WIFI Live Stream mode, for FPV flying.

❸ **Settings**: Volume of Music and Game sound adjustment and Language settings.

❹ **Help** : Button instruction.

❺ **Media Folder** : After taking photos and videos, you can review them from this folder.

APP Operation Method

pic 1

❶ After connecting the WIFI signal and enter into the operation interface, press the " on/off button" to open the sticks.

❷ Wait for 2 seconds till the lights of the drone stop flashing then press the "Calibration button" to calibrate the drone if first time play.

❸ Push the left throttle to the lowest left, and meanwhile push the right sticker to the lowest right , and the rotors of the drone start rotating, that unlock the motors. (see pic 1)

❹ Press the "one key take off " to fly up the drone (or push up the left throttle directly), to take off. Press the "one key landing" (or keep pushing down the throttle directly) to land the drone.

16 Forward / backward trimmer

17 One key take-off

18 Turn left / right trimmer

19 Left / right side flying trimmer

20 One key landing

FPV mode with the remote controller

1. Power on the drone and then power on the remote, after matching the frequency between the remote and drone (the lights of the drone and remote stop flashing), then connect the WIFI signal between your device and the drone.

2.Put the device onto the clamp of the remote controller, choose the "FLY" mode on the app, then you can control the drone with the remote while receiving the transmission on the mobile. (in this way the "PVE" battle mode is not recommended)

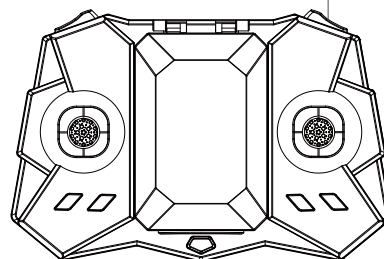

pic 2

In this mode, press the "Picture" & " Fliming" button on interface or on controller, both can take pictures and videos.
After photographying you can review the files from the review folder, or from your album file of your mobile device.
